DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 10 and 11 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by McGahon et al. (6,984,245).

McGahon et al. clearly discloses the claimed implant including flat sidewall portions (see Fig. 1) and holes (e.g. 40) therein offset by about 30 degrees. The implant is made of bone (para. 4). With regard to claim 3, the inside surface of the hole comprises a threadform and the surfaces thereof are smooth.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over McGahon et al. (6,984,245) in view of Ferreira et al. (2003/0069640).

McGahon et al. disclose the claimed invention except for the cuts being of a concentric shape. Ferreira et al. disclose a similar implant 10 having cuts provided in a concentric shape to enhance bone fusion and resist migration and retropulsion in all directions (see, e.g., para. 2 and Fig. 9). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the implant of McGahon et al. with cuts of a concentric shape, in view of Ferreira et al., in order to enhance bone fusion and resist migration and retropulsion in all directions.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
